

CIHI'S PRIMARY HEALTH CARE (PHC) INFORMATION PROGRAM OF WORK

CIHR PHC Summit
January 18th – 19th 2010

Greg Webster, CIHI
gwebster@cihi.ca

Stakeholders Need Better PHC Information

Several sources of input from major CIHI stakeholders confirmed a high priority need for more and better PHC information to help jurisdictions establish effective policies and programs by monitoring and understanding PHC.

What PHC information is needed?

CIHI's PHC Indicators

- 105 PHC Indicators developed using a consensus process

Potential Data Sources:

- 1/3 patient survey
- 1/3 provider/org survey
- 1/3 clinical admin databases

- Many data gaps

Solutions

CIHI can respond to stakeholders' PHC needs with 2 types of solutions:

Data

Enhance the scope and quality of data through standards and data development

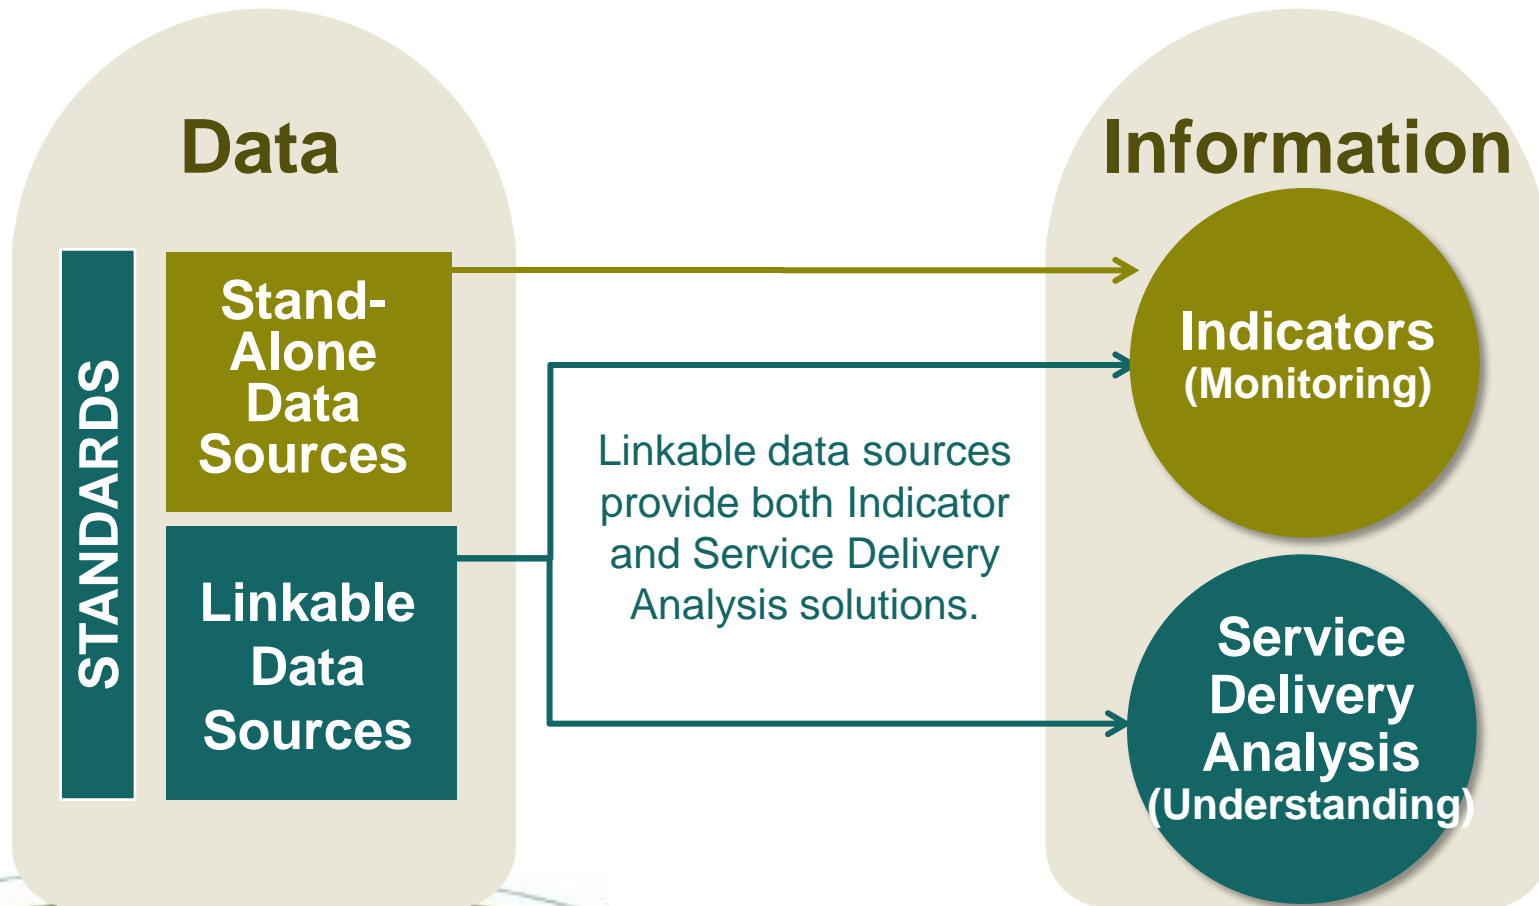

Standards and database development lay the groundwork for meeting stakeholder needs.

Information

Produce indicators and analyses that are relevant, actionable and address the need to monitor, understand and improve PHC.

Maximizing Benefits

By developing linkable data sources, we can increase the range of information needs that can be met

Goals and Objectives

GOAL: Improve access, quality, efficiency and results of Primary Health Care

- Use existing data to provide new analyses for PHC
- Develop new pan-Canadian data sources
- Develop EMR content standards
- Be a trusted recipient and analyst of PHC data
- Work with others to align new PHC data developments
- Collaborate with policy-makers, clinicians & researchers to achieve this goal

A series of white, wavy lines that originate from the left side of the slide and curve upwards and to the right, eventually fading into the background.

**Some data gaps have
been addressed but
much remains to be done**

Examples of recent data:

Experiences with PHC

- 91% reported a regular place of PHC
- 68% with regular PHC provider 5 or more years
- 65% reported always having enough time to discuss concerns
- 13% reported difficulties getting access for routine or ongoing care
- 85% reported wait time for routine or ongoing care acceptable or somewhat acceptable

Experiences with PHC (continued)

- 23% were typically given a written list of things to do between visits (among those with at least 1 of 7 chronic conditions)
- 40% did not make a treatment plan with their PHC provider (among those with at least 1 of 7 chronic conditions)

Adults Who Rated the Quality of Primary Health Care as Excellent or Very Good
